

Website Product Requirements Document (PRD) & Execution Strategy

Owner: Muhammad Dayan | Founder & CEO, Xiomics Systems

1. The Agent-First Execution Strategy

Building a highly animated, professional website requires a strategic split between architecture and execution. You will utilize KIRO for architecture planning and Google Antigravity 2.0 for multi-agent coding.

1. **The Brain Dump (KIRO):** Open your KIRO workspace and initiate the spec-building process by providing the core PRD.
2. **Generate the Constitution:** KIRO will generate markdown files (arch.md, story.md, dev.md) that act as the unbreakable source of truth for the project.
3. **Launch Antigravity Agent Manager:** Load the workspace containing your KIRO specs into Google Antigravity.
4. **Spawn Specialized Agents:** Assign specific agents (e.g., Claude Sonnet 4.5 for DOM structure, Gemini 3 Pro for animations) to execute sections modularly.
5. **Review & Merge:** Review the generated Artifacts in the browser surface and iterate using natural language comments.

2. The Initial KIRO Prompt

Copy and paste the prompt and PRD below directly into KIRO to begin the process.

Act as a Principal Software Architect. Read the following PRD and generate the core constitution markdown files (arch.md, story.md, dev.md).

[Paste the PRD from Section 3 below]

3. Product Requirements Document (PRD)

3.1 Project Overview

This is a premium, high-performance web application serving as a hybrid personal brand hub and B2B lead generation engine for Xiomics Systems. The goal is to establish authority, showcase AI automation capabilities, highlight community leadership, and drive conversions (booking consultations or exploring links).

3.2 Target Audience & Conversion Goals

- **B2B Clients:** Convert via Xiomics Systems service highlights into consultation bookings.
- **Recruiters/Partners:** Showcase technical depth, leadership, and operational management.
- **Students/Community:** Drive traffic to Topmate for mentorship and Linktree for social hubs.

3.3 Technical Stack Requirements

The agents must strictly adhere to this stack for all generated code:

Layer	Technology
Framework	Next.js 15 (App Router), React, TypeScript
Styling	Tailwind CSS, Shadcn UI

Layer	Technology
Animations	Framer Motion (UI transitions), GSAP (Scroll triggers), Three.js (Backgrounds)
UX/Performance	Lenis (Smooth scrolling), Lucide React (Icons)
Deployment	Vercel (Configured for edge rendering and optimal SEO)

3.4 Design System & Aesthetics

- **Vibe:** Apple-level minimalism meets Linear.app precision. Premium, founder-focused, and highly technical.
- **Color Palette:** Deep Black (#000000) background, crisp White (#FFFFFF) typography, with a subtle electric neon accent (e.g., Cyan #00D4FF or Deep Purple #7C3AED) for active states and highlights.
- **Interaction Design:** Magnetic buttons, smooth page transitions, scroll-triggered reveals, and a subtle, interactive background (floating AI nodes or neural networks).

3.5 Core Architecture & Section Breakdown

Generate the application with the following sequential flow on a single-page architecture:

- **Hero Section:** Large typography: "Muhammad Dayan". Subtext: "Founder & CEO @ Xiomics Systems | Building Agentic AI Systems & Growth Engines." Background: Interactive Three.js neural network or particle system. Dual CTA Buttons: "Work With Me" (Primary), "Explore Journey" (Secondary).
- **The Impact (Stats Bar):** Animated counters triggered on scroll. Data points: 1700+ LinkedIn Followers, 70+ Interviews Conducted, 10+ Communities Served, 100+ Hours

Saved via Automation.

- **The Journey (Experience Timeline):** A vertical, aesthetic timeline detailing cross-functional roles. Include: Data Science at UET Lahore, Founder at Xiomics, PR Director at AWS SBG & PALS, Business Dev at BetaSync, and Travel Manager at Dreamport.
- **Xiomics Systems (B2B Engine):** Premium card grid detailing core services. Items: AI Voice/Chat Agents, n8n Automations, Lead Generation Systems, Business Dashboards. CTA: "Book a Strategy Call".
- **Leadership & Visual Proof:** Animated infinite logo marquee (AWS, PALS, UET XNews, LoopLab, IxDF). Media Gallery: High-quality masonry grid highlighting Event Photography, Media Lead Awards, and Speaker engagements (e.g., Direct Client Acquisition).
- **The Link Hub (QR Section):** Clean layout featuring a scanable QR code. Tagline: "One Scan. Every Link." (Routing to Linktree).
- **Footer & Contact:** Integration ready contact form. Social/Booking icon array: Topmate, Email, LinkedIn, GitHub, Instagram.

3.6 Execution Instructions for KIRO

1. Do not generate the UI code yet.
2. Acknowledge this PRD and ask maximum 3 clarifying questions regarding technical preferences.
3. Generate the foundational arch.md (folder structure), dev.md (coding standards), and story.md (user journey) files.
